# ΟΔΗΓΟΣ ΧΡΗΣΗΣ ΚΩΔΙΚΑ ΑΠΟ GITHUB

1. Αρχικά πρέπει να κατεβάσετε το Git Bash: https://git-scm.com/

2. Μετά αφού ανοίξετε το bash μπορείτε να ελέγξετε που θα αποθηκεύσετε στον υπολογιστή σας τον κώδικα που θα κατεβάσετε από το GitHub με το εξής τρόπο:

---

Here are the steps I followed:

1. In bash, check in which directory you are by using the command:

```
$ pwd
```

2. copy the URL of the directory you want to go like after using the first command ( PWD ) I got:

```
$  /c/Users/yourUsername
```

3. Now I want to change this to the directory of `c` drive and folder `MyPictures`. To do that, I will go the directory of `MyPictures`, copy the URL, and paste it in the Git bash. However, before that:

| Windows Directory Path | <---- Becomes -----> | *nix Directory Path |
|---|---|---|
| C:\Users\MyUserFolder\ | | /c/Users/MyUserFolder/ |

`C:\MyPicture` becomes `$ cd /C/MyPicture` (backslashes are replaced with slashes)

4. if the folder name is having some spaces like (my program) then you need to enclose it in double quotes like:

```
$ cd "C:\Program Files"
```

5. Remember to change directory you just need to copy the `requiredUrl` and paste that in bash with double-quotes like:

```
cd "required URL"
```

**Note:** URL required with slashes.

---

3. Ακολουθήστε τα βήματα του link :
